Description of Major ICs	1-32	Block Diagrams	1-48
Internal Block Diagram		Printed Circuit Boards	1-50
of the Other ICs	1-41	Schematic Diagrams	Insertion
Internal Connection of the FL Display ...	1-43	Parts List	2-1

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
Do not use a line isolation transformer during this check.
 - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

● Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Switches and Controls

Familiarize yourself with the main switches and controls on your JVC RX-715VTN receiver.

Receiver

- 1 SURROUND indicator
 - 2 Display window
 - 3 RECEIVED/STANDBY indicator
 - 4 REMOTE SENSOR window
 - 5 MASTER VOLUME control
 - 6 SOURCE SELECT buttons
 - 7 TUNER buttons
 - 8 PHONES jack
 - 9 SPEAKERS buttons
 - 10 TREBLE control
 - 11 BASS control
 - 12 BALANCE control
 - 13 CHARACTER buttons
 - 14 SURROUND processor buttons
 - 15 LOUDNESS switch
 - 16 POWER switch
- Turns power On or Stand by

Remote Control

- 1 POWER switch
- 2 SOURCE SELECT buttons
- 3 Buttons for operating components
- 4 CONTROL buttons
- 5 SURROUND processor buttons
- 6 FADE MUTE button
- 7 SLEEP button
- 8 VOLUME button

Installation

This section explains how to connect the receiver to other stereo equipment and speakers, and how to connect the power supply.

Cautions

Before Installation

 **CAUTION!** Before installing your receiver:

- Make sure your hands are dry.
- Turn the power off to all components.
- Read the installation instructions for all components you are going to connect.

Positioning the Receiver

 **CAUTION!**

- Install the receiver in a location that is level and protected from moisture and direct sunlight.
- The temperature around the receiver must be between 23° and 104° F (–5° and 40° C).
- Make sure there is good ventilation around the receiver. Poor ventilation could cause overheating and damage the receiver.

Making Power Connections

 **CAUTION!**

- Do not handle the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. Always grab the plug directly so as not to damage the cord.

Handling the Receiver

 **CAUTION!**

- Do not insert any metal object into the receiver.
- Do not disassemble the receiver or remove screws, covers, or cabinet.
- Do not expose the receiver to rain or moisture.

Connecting Stereo Components

Before Starting

You can connect the following components to the receiver:

Audio components

- Turntable
- CD player
- Two tape decks

Video components

- VCR
- Video disc player
- TV

IMPORTANT! The left channel of any audio component must be connected to the left-channel jack of the receiver, and the right channel to the right-channel jack. If they are reversed, the stereophonic image will not be correct.

NOTE: To ensure correct connections, insert the red plug into the right channel.

Basic Connections for Audio Equipment

Connect stereo components to the amplifier using cables with RCA PIN plugs. If you are connecting a tape deck, connect the output jacks on the tape deck to the jacks marked IN (PLAY) on the receiver, and the input jacks to those marked OUT (REC).

NOTES:

- Any turntables incorporating a small-output cartridge such as an MC (moving-coil type) must be connected to this amplifier through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.
- If a ground cable is fitted to your turntable, connect the cable to the screw marked GND on the rear panel.

COMPU LINK-3 Connections

COMPU LINK-3 SYNCHRO jacks on the back of the receiver connect the COMPU LINK remote control system. This system connects other JVC audio components with the receiver to make listening and recording more convenient. To use this system, attach the cables provided with your JVC components to the COMPU LINK-3 SYNCHRO jacks on the rear panel of each component. Then connect the cables to the receiver.

NOTES:

- *COMPU LINK-3 is an upgraded version of COMPU LINK-1. If your equipment provides COMPU LINK-1 jacks, you can still connect your equipment, but slight imperfections may result. Automatic Power ON/OFF, for example, may not always function properly.*
- *Refer to page 24 for details about the COMPU LINK remote control system.*

⚠ CAUTION! Do not connect Tape Deck 2 to the COMPU LINK jacks. It may cause the COMPU LINK system to malfunction.

Other Audio Connections

Use the socket on the back of the receiver to connect the power supply of any audio components. By pressing the POWER switch on the remote control, you can turn the receiver, and all connected components, on or off at the same time.

In the United States, AC outlets have a capacity of 180 watts.

⚠ CAUTION! Do not connect any components that consume more power than the capacity of the AC outlet. This capacity is indicated above the socket on the back of the receiver.

Basic Connections for Video Components

Connect the audio signal jacks of your video components to the **AUDIO** jacks on the receiver. Connect the video signal (composite) jacks to the **VIDEO** jacks. If you are connecting a VCR, connect the output jacks on the VCR to the jacks marked IN (PLAY) on the receiver, and the input jacks to those marked OUT (REC).

NOTE: Keep the connecting cables for your TV, VCR, and antenna away from the power cord leading from the back of the receiver. The power cord may cause noise or screen interference. We recommend that you use coaxial cable to connect the antenna, since it is well-shielded against interference.

AV COMPU LINK Connection

The AV COMPU LINK jacks on the back of the receiver connect the AV COMPU LINK system. This system connects other JVC video components with the receiver to make viewing and recording more convenient. To use this system, attach the shielded audio cable with the monaural mini plug (3.5 mm diameter) to the AV COMPU LINK jacks on the back of each component. Then connect the cable to the receiver.

IMPORTANT! There are three AV COMPU LINK jacks on the back of the receiver. Connect your TV to the jack marked TV. Connect your VCR to either of the remaining two jacks.

IMPORTANT! After connecting your VCRs to the AV COMPU LINK jacks, set the remote control codes before trying to operate them. Set the VCR connected to the VCR 1 jacks to remote control code A. Set the VCR connected to the VCR 2 jacks to code B. For details on how to set the remote control code, refer to your VCR user manual.

NOTES:

- Make connections to the AV COMPU LINK jacks, not the COMPU LINK-3 SYNCHRO jacks.
- Some VCRs use the same jack for both AV COMPU LINK and SWAP editing. In such a case, you can't use SWAP editing function after connecting the AV COMPU LINK.

Connecting Speakers

Before Starting

You can connect the following combinations of speakers:

- two pairs of front speakers to produce normal stereo sound
- one pair of rear speakers to produce the surround sound effect
- one center speaker for more effective surround sound

⚠ CAUTION! Use speakers with the impedance marked near the terminals.

Connecting Speakers

To connect each speaker, follow these steps:

Step 1 Open each terminal on the back of the receiver and insert the end of the speaker wire, as shown.

Step 2 Close the terminals to clamp the speaker wires in place, as shown.

NOTE: Use the wire supplied with the speakers.

Connecting the Front Speakers

Connect the front speakers to the FRONT SPEAKERS terminals. Up to two sets of front speakers can be connected.

Connecting the Rear Speakers and Center Speakers

Connect the rear speakers to the REAR SPEAKERS terminals. Connect the center speaker to the CENTER SPEAKER terminals.

IMPORTANT! Make sure that both rear speakers are connected. Otherwise, you will hear no sound from the rear speakers.

NOTE: It is recommended to use an antimagnetic speaker for the center speaker. Position the center speaker near the TV monitor.

Increasing Power for the Rear Speakers

To increase power for the rear speakers, you can use a separate amplifier.

- Step 1** Connect the input terminals of the power amplifier to the REAR OUT terminal on the back of the receiver.
- Step 2** Connect the rear speakers to the speaker terminals of the connected amplifier.

Enhancing Lower Frequencies

Connect the input terminal of the amplifier to the SUBWOOFER jack of the receiver. Then connect a subwoofer to the speaker terminals of the connected power amplifier.

Connecting an AM Antenna

Before Starting

One AM loop antenna is supplied with your receiver.

Basic Connections

To connect the AM loop antenna to the AM LOOP terminals, follow these steps:

- Step 1** Open each terminal and insert one of the two ends of the AM antenna wire.
- Step 2** Close the terminals to clamp the antenna wires in place.
- Step 3** Stand the AM loop antenna on its own base, as shown. Set it on any flat surface.

AM Outdoor Antenna

If your AM broadcast reception is unsatisfactory, you should connect an AM outdoor antenna in addition to the loop antenna. The antenna wire should be 16 to 40 feet (5 to 13 meters) long.

Connect one end of the outdoor single vinyl-covered antenna wire to the AM LOOP terminal marked AM EXT.

IMPORTANT! The AM loop antenna must be installed to receive AM broadcasts. Do not disconnect the loop antenna when installing an outdoor antenna.

IMPORTANT! Except for the connection, make sure no uninsulated antenna wire touches the rear panel of the receiver. Otherwise, the receiver might not pick up AM broadcasts.

Connecting an FM Antenna

Before Starting

A temporary FM antenna and cable is supplied with your receiver. If reception with this antenna is not satisfactory, you may consider purchasing a 300-ohm feeder-cable antenna or a 75-ohm coaxial-cable antenna:

⚠ CAUTION! Before connecting the new FM antenna, disconnect any other FM antenna.

Connecting the Temporary FM Antenna

To connect the supplied antenna, follow these steps:

- Step 1** Loosen the two screws on the matching transformer.
- Step 2** Connect the two conductors of the antenna cable to the terminals on the matching transformer.
- Step 3** Tighten the two screws.
- Step 4** Connect the matching transformer to the FM 75Ω COAXIAL terminal.

Connecting a 300-Ohm FM Antenna

To connect a 300-ohm feeder-cable antenna, use the same steps as for the temporary FM antenna.

Connecting a 75-Ohm FM Antenna

To connect a 75-ohm coaxial-cable antenna, follow these steps.

- Step 1** Remove the cover of the matching transformer by lifting the tabs on both sides.
- Step 2** Remove the jumper wire from the notch in the center of the fitting.
- Step 3** Wind the wire securely around the plastic pole next to the fitting.
- Step 4** Insert the center conductor of the coaxial cable into the notch.
- Step 5** Using a pair of pliers, secure the fitting in the center of the matching transformer so that the shield braid of the coaxial cable is held tightly in the fitting.
- Step 6** Snap the cover back onto the matching transformer.

Connecting the Power

Connecting the Power Supply

After checking all connections, insert the power cord plug into an outlet.

When the power supply is connected correctly, the POWER STANDBY indicator lights on the front of the receiver.

⚠ CAUTION!

- Do not handle the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. Always grasp the plug directly so as not to damage the cord.
- Do not plug the power cord into a socket until all components are connected correctly.

IMPORTANT! *If the power cord is disconnected or a power failure occurs, the receiver settings in memory are retained for 2 or 3 days.*

Inserting Batteries into the Remote Control

The remote control requires two batteries (supplied). To insert batteries, follow these steps:

- Step 1** On the back side of the remote control, press down on the battery cover and slide it out.
- Step 2** Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (–) to (–).
- Step 3** Slide the cover in.

Replacing Batteries

If the range or effectiveness of the remote control decreases, replace the batteries. Use two (2) AAA (24F) dry-cell batteries of the R03/UM-4 type.

⚠ CAUTION! Follow these precautions to avoid leaking or cracking cells:

- Place batteries in the remote control so they match the polarity indicated: (+) to (+) and (–) to (–).
- Use the correct type of batteries. Batteries that look similar may differ in voltage.
- Always replace both batteries at the same time.
- Do not expose batteries to heat or flame.

Operation Outline

Basic Operation Reference

1 Turn on the power

Push the POWER switch to turn on the receiver. The display lights:

NOTE: Pushing the POWER switch again turns off this unit and lights the **STANDBY** light. A small amount of power (5 watts) is consumed under these conditions, even if the receiver is turned off. To shut off the power completely, unplug the power cord from the outlet.

2 Select speakers (page 19)

Use the SPEAKERS switch to choose between the two sets of speakers. To use your headphones, insert the headphone plug into the PHONES jack on the receiver.

3 Choose an audio source (page 14)

To choose an audio source, press one of the SOURCE SELECT buttons.

4 Turn the surround sound effect on or off (pages 21-23)

To turn the surround sound effect on or off, press the SURROUND button on the receiver or ON/OFF button on the remote control. When the surround processor is activated, one of the effect program indicators (PRO LOGIC, 3CH LOGIC, or HALL) lights up.

5 Operate the audio source (pages 24-27)

Refer to the manual provided with each component. If your JVC components are connected to the COMPU LINK jack of the receiver, you can operate them using the remote control.

6 Adjust volume and tone (pages 19-20)

Rotate the MASTER VOLUME control on the receiver or press the VOLUME button on the remote control to adjust volume. See pages 19-20 for other ways to change the volume or tone.

Selecting the Source

Listening or Viewing

Press one of the SOURCE SELECT buttons on the receiver or the remote control.

CD*	Listen to the CD player.
PHONO*	Listen to a record.
TAPE 1*	Listen to the tape deck connected to the TAPE 1 jacks.
TAPE 2 MONITOR	Listen to the tape deck connected to the TAPE 2 jacks.
VCR	View a TV program or pre-recorded video tape.
VIDEO	View a video disc.
FM*	Listen to an FM broadcast.
AM*	Listen to an AM broadcast.

IMPORTANT! The TAPE 2 MONITOR button has a different function from other source selector buttons, because it allows you to monitor the quality of the recording. For more details, see Monitoring below.

***NOTE:** On the remote, when you press one of the SOURCE buttons marked above with an asterisk, the receiver automatically turns ON (even if it was OFF before).

Recording

The source being played is automatically selected as the source to be recorded. While recording, you can listen to the selected source at any desired volume and tone settings.

NOTE: Volume and Tone adjustments and the surround sound effect do not affect recording.

IMPORTANT! When recording from TAPE 2 to TAPE 1, press the TAPE 2 MONITOR button and another button other than TAPE 1.

Monitoring

Using the Monitor feature, you can compare the sound quality of the source to the sound quality of the recording being made.

To use the Monitor feature while recording onto a cassette deck connected to the TAPE 2 jacks, follow these steps:

Step 1 Press the TAPE 2 MONITOR button on the receiver or TAPE 2 button on the remote control.

The "TAPE 2 MONITOR" light appears and you can listen to the sound of the cassette deck connected to the TAPE 2 jacks. You are now hearing the quality of the recording, not the quality of the source.

Step 2 Press the TAPE 2 MONITOR button on the receiver or TAPE 2 button on the remote control again.

This turns off the "TAPE 2 MONITOR" light, and the speakers play the previously selected source.

NOTE: If the cassette deck has three heads, you can hear the sound of the recording at the same time as it records on the tape.

Receiving an AM/FM Broadcast

To receive an AM/FM broadcast, select either AM or FM using the AM button or FM button. Then tune to the precise frequency using the FREQUENCY buttons.

Tuning

Tune to the frequency of a desired station using the FREQUENCY buttons. Pressing the right button increases the frequency, and pressing the left button decreases the frequency. Tapping the FREQUENCY button once changes the frequency in steps of 10 kHz for AM and 0.1 MHz for FM.

There are two tuning modes: Manual and Automatic.

Manual Tuning

If you know the frequency of a desired station, hold down the FREQUENCY button to start the frequency changing quickly. Release the FREQUENCY button near the desired station and tap it repeatedly until you arrive at the correct frequency.

Automatic Tuning

If you want to scan frequencies for a desired station, hold down the FREQUENCY button to start the frequency changing quickly. When you release the FREQUENCY button, the frequency continues to change until it reaches a station.

When a station is correctly tuned, the “TUNED” light appears on the display window.

Once a tuned frequency is preset, it can be directly recalled using the TUNER buttons. For details, see pages 16–17.

NOTE: When you use automatic tuning, weak stations are ignored. To pick up weak stations, use manual tuning.

IMPORTANT! If the receiver is tuned to a station but the “TUNED” light does not appear, try rotating the antenna for better reception.

Selecting an FM Reception Mode

Pressing the FM MODE/MUTE switch switches between these modes.

The “MUTE-AUTO” light appears in the display window. You hear either stereo sound or monaural sound, depending on the broadcast. If it is a stereo broadcast, the “STEREO” light appears. This mode is also useful for suppressing static “noise” between stations.

The “MUTE-AUTO” light disappears. You hear monaural sound even if a broadcast is in stereo. This mode is also useful when a stereo broadcast is noisy because of a weak signal.

NOTE: Using the Automatic Tuning mode, the sound of a broadcast with a weak signal may be muted. In this case, select the monaural mode.

Presetting Tuned Frequencies

You can preset up to 40 radio stations by assigning channel numbers (1 through 40) to them. Once a station is preset, you can listen to it by entering the preset number. There are two ways to preset: manual or automatic.

Entering Channel Numbers

To select numbers, use the TUNER PRESET buttons on the receiver, or the PRESET buttons on the remote control.

Press > (PRESET + on the remote) to increase the selected number, and press < (PRESET – on the remote) to lower the selected number.

To select numbers from 11 through 40, using the +10 button is more convenient. Each time you press the +10 button, the number will increase by a multiple of 10.

IMPORTANT! Before you use the PRESET buttons on the remote, press the AM or FM button on the remote.

Manual Presetting

To use manual presetting to assign channel numbers to your favorite stations, follow these steps:

Step 1 Tune to a station. If necessary, follow the procedure on page 15.

Step 2 Press the MEMORY button.

The “MEMORY” light appears in the display window.

Step 3 Using the TUNER PRESET buttons, select a number (1 through 40), then press the MEMORY button to enter the selected number. This number is the channel number you are assigning to the station.

IMPORTANT! You must enter the channel number while the “MEMORY” light is on. You have about 5 seconds to do this. If the light disappears before you enter the channel number, press the MEMORY button again.

Step 4 When the MEMORY light disappears and the channel number is displayed, presetting is completed.

Automatic Presetting

To use automatic presetting to preset up to 40 stations automatically, follow these steps:

- Step 1** Press the AM or FM button to select AM or FM.
- Step 2** Using the FREQUENCY buttons, move to the lowest frequency from which you want scanning to begin.
- Step 3** Press the AUTO MEMORY button.
- The “AUTO MEMORY” light appears in the display window.
- Step 4** Using the TUNER PRESET buttons, select a channel number (1 through 40) to the first tuned station, then press the AUTO MEMORY button to enter the selected number. From that point, scanning starts and stations are assigned channel numbers in ascending order.

IMPORTANT! You must enter the channel number while the “AUTO MEMORY” light appears. If this light disappears before you enter the channel number, press the AUTO MEMORY button again.

Frequencies are scanned in ascending order. When a station is tuned in, scanning stops and the “TUNED” light and preset number appear. The station is preset about 4 seconds later and the “MEMORY” light appears. If you do not want to preset this station, press the AUTO MEMORY button within 4 seconds. Scanning restarts without presetting that station.

When the MEMORY light disappears, scanning continues until one of the following occurs:

- Another station is tuned in
- The upper limit of the tuning range is reached
- All 40 channel numbers have been assigned

When Auto Presetting is completed, the last preset station is received.

NOTE: To stop scanning at any time, press either TUNING button once.

Recalling a preset Channel

You can recall a preset channel using the TUNER PRESET buttons on the receiver or the PRESET buttons on the remote control (see page 16).

You can also recall a preset channel by specifying the number directly, using the remote control. First press the AM or FM button on the remote, then enter the channel number using 1-10, and the +10 button. To choose numbers from 1 through 10, press the appropriate buttons. To choose number from 11 through 40, press the +10 button and one other button.

For example:

To choose 17 Press +10, then 7.

To choose 20 Press +10, then 10.

To choose 25 Press +10 twice, then 5.

To choose 40 Press +10 three times, then 10.

Your channel number will appear.

Assigning Names to Preset Stations

Entering Title Characters

You can assign a title of up to four characters (for example, a station name) to each preset station (1-20). When a preset station is called, its title is displayed in the display window.

After selecting the preset channel (1-20), enter title characters as follows:

Step 1 Press the CHARACTER button.

The cursor appears at the first character position.

IMPORTANT! You must press the CHARACTER button while a preset number appears. You have about 4 seconds to do this. If the display returns to tuning frequencies before you press the CHARACTER button, select the preset channel again.

If a title has already been assigned, the first character blinks. If you are not changing this character, press the CHARACTER button.

Step 2 Using the DOWN and UP buttons, select the character to be entered.

You can choose from the characters shown below. Pressing the DOWN or UP button selects the next character in the sequence.

Step 3 When the desired character appears, press the CHARACTER button.

The cursor moves to the next character position. You can enter up to four characters by repeating Steps 2 and 3.

Step 4 Press the ENTER button to save the selected characters.

Adjusting the Volume and Tone

Adjusting the Volume

Using the MASTER VOLUME Control

Use the MASTER VOLUME control to adjust the volume from the left and right speakers. Rotating the dial to the right increases the volume. The volume from the speakers and the headphones increases simultaneously.

NOTE: Volume can also be adjusted using the remote control. Press the **VOLUME** button marked **+** to increase the volume, or the **VOLUME** button marked **-** to decrease the volume.

⚠ CAUTION! Listening to extremely loud sound may damage your hearing. Be especially careful when using headphones.

Muting the Sound

Press the FADE MUTE button on the remote control to decrease the volume easily when you receive a phone call or a visitor.

IMPORTANT! If you are listening at very high volume, you may need to press **FADE MUTING** a second or third time to reduce volume completely.

Selecting the Speakers

Pushing in **SPEAKER** button 1 or 2 activates that pair of speakers. Pressing either button again deactivates that pair of speakers. When the button is in, that pair is activated. You can listen to both pairs, pair 1, pair 2, or neither pair.

IMPORTANT! If only one set of speakers is connected, pressing "in" both speaker buttons will produce no sound.

Listening to Headphones

PHONES

Insert the headphone plug into the **PHONES** jack. To limit sound to the headphones (no sound from the speakers), press **SPEAKER** buttons 1 and 2 to deactivate all speakers.

⚠ CAUTION! To avoid hearing damage, turn the volume down before plugging in the headphones, then gradually increase the volume.

Adjusting the Left-Right Balance

Use the **BALANCE** control to adjust the balance between the left and right channels. Rotating the dial to the right increases the right-channel volume, and rotating it to the left increases the left-channel volume. The **BALANCE** control affects both sets of speakers and the headphones.

Adjusting Bass and Treble

Listening at Low Volume

Adjusting the Tone

Use the BASS control to adjust low pitches and the TREBLE control to adjust high pitches. Turn either control to the right for intensified pitch. Set both controls at the FLAT position for normal listening.

Human ears are not sensitive to low-frequency sounds at low volume. To compensate for this, the loudness function automatically boosts the bass level as you lower the volume.

To use the loudness function, press the LOUDNESS switch. The "LOUDNESS" indicator lights in the display window. Press the switch again to turn the feature off.

Using the Sleep Timer

The sleep timer lets you listen to any program for up to 80 minutes before it automatically shuts off. The receiver goes back to standby mode (off) after the time period that you specify. To use the sleep timer:

Step 1 Press the SLEEP button on the remote control.

"SLEEP" appears in the display window.

IMPORTANT! You have 5 seconds to proceed to the next step. If you wait more than 5 seconds, return to step 1.

Step 2 Press the SLEEP button again to set the timer.

Each time you press the SLEEP button, the time limit is extended 10 more minutes. You can set up to 80 minutes.

Step 3 Stop when you reach the desired time period.

The set time indicator disappears after a few seconds. The receiver will automatically return to standby mode (off) after the time period you specified.

NOTES:

- After setting the sleep timer, you can change sources as often as you wish within the specified time period.
- After setting the sleep timer, you can check the remaining time in minutes by pressing the SLEEP button. You can extend the time period further, in 10-minute increments, by pressing the SLEEP button again.

Using the Surround Processor

The built-in surround processor enables you to enjoy a 3-dimensional sound effect.

Overview

Types of Sound Effects

The surround sound processor provides three types of sound effects — Dolby Pro Logic Surround, Dolby 3-Channel logic, and JVC's Hall surround — so that you can experiment with a variety of sources and surround sound effects.

IMPORTANT! The surround processor has no effect on monaural (non-stereo) sources.

What is Dolby Pro Logic Surround?

The soundtracks of video software bearing the  **DOLBY SURROUND** mark* include the same encoded surround information as found in Dolby Stereo films. The Dolby Pro Logic Surround decoder is a consumer version of the decoding process used in professional Dolby Stereo equipment, and it lets you recreate the theater ambience and effects of Dolby Stereo at home.

Dolby Pro Logic Surround decoder provides these features:

- four primary sound channels – Left, Right, Surround, and additional Center channel
- adaptive matrix to actively derive each channel

The result is that Dolby Pro Logic Surround has the effect of widening the useful listening area and enhancing directional effects, while at the same time locking center channel information onscreen for the home audience.

** Manufactured under license from Dolby Laboratories Licensing Corporation. Additionally licensed under one or more of the following patents: U.S. number 3,959,590; Canadian numbers 1,004,603 and 1,037,877. "Dolby", "Pro Logic", and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.*

Turning On or Off the Surround Processor

To operate the surround processor, press the SURROUND button on the receiver or ON/OFF button on the remote control. One of the surround program indicators lights. Then press the desired operation buttons.

Selecting a Sound Effect

Selecting a Program

The surround processor provides three types of sound effects.

- “PRO LOGIC” To play a source marked  **DOLBY SURROUND**. The sound is reproduced through the front speakers, center speaker and rear speakers.
- “3CH LOGIC” To play a source marked  **DOLBY SURROUND** when you are not using rear speakers. The sound is reproduced through the front speakers and center speaker.
- “HALL” To play an ordinary stereo source with one of JVC’s surround sound effects, resembling acoustics such as those in a music hall, for example. The sound is reproduced through the front speakers and rear speakers.

To select one of these programs, use the MODE button. Each time you press the button, one of the surround program indicators will light up in the following cycle:

“PRO LOGIC” > “3CH LOGIC” > “HALL” > begins the cycle again

Selecting a Center Channel Mode

When you select PRO LOGIC or 3CH LOGIC program, you must also select a center channel mode. The following modes are available:

- “PHANTOM” Use this mode when no center speaker is used. The entire center channel is reproduced through the front speakers. 3CH LOGIC doesn’t have this mode.
- “NORMAL” Use this mode when the center speaker is smaller than the front speaker. The bass frequencies in the center channel are reproduced through the front speakers.
- “WIDE” Use this mode when the center speaker is as large as the front speaker. The entire center channel is reproduced through the center speaker.
- “OFF” The center channel is muted.

To select one of these modes, use the CENTER MODE button on the receiver. Each time you press the button, one of the center channel modes will appear in the display window in the following cycle:

“PHANTOM” > “NORMAL” > “WIDE” > “OFF” > begins the cycle again

Adjusting the Surround Sound Effect

The surround processor requires the following two adjustments to produce the maximum surround sound effect:

- center channel level and rear channel level
- delay time

NOTE: With conventional surround processors, you must adjust the input signal balance. The RX-715VTN, however, adjusts this balance automatically. When you set the center mode to "OFF", you can check the effect of this automatic balancing.

After selecting "PRO LOGIC" program, make adjustment as follows:

Adjusting Center Channel Level and Rear Channel Level

Step 1 Press the TEST button.

The test tone will move clockwise from speaker to speaker.

Step 2 Adjust the center channel level using the CENTER LEVEL buttons. Adjust the rear channel level using the REAR LEVEL buttons.

You can adjust these levels in 2 dB units within a range of ± 20 dB. The sound levels of the left and right speakers should be the same.

IMPORTANT! Before you use the CENTER LEVEL buttons or the REAR LEVEL buttons on the remote, press the SURROUND LEVEL button on the remote.

Step 3 Press the TEST button.

The test tone will cease.

NOTES:

- If "PHANTOM" is selected as the center channel mode, the CENTER LEVEL button is disabled.
- When you are not using rear speakers, you can adjust the center channel level after selecting "3CH LOGIC" program. In this case, the REAR LEVEL button is disabled.
- It is convenient to use the remote while sitting in your listening position.

Adjusting Delay Time

Use the DELAY buttons to compensate for variations in the distance between your listening position and different sets of speakers. Delay time can be set in 3 steps.

"DELAY-1" When the distance to your surround speakers is greater than the distance to your main speakers.

"DELAY-2" When the distance to your surround speakers is almost equal to the distance to your main speakers.

"DELAY-3" When the distance to your surround speakers is less than the distance to your main speakers.

NOTE: You can customize the "DELAY" settings for "HALL" program.

Operating Source Components

COMPU LINK Remote Control System

The COMPU LINK remote control system lets you operate the receiver and JVC components from the remote supplied with this receiver. Control signals for JVC audio components are preset in the receiver's remote control.

Connecting the COMPU LINK-3 SYNCHRO jacks on the back of the receiver will allow you to use the four functions listed in the left column.

Remote Control

You can control all components via the REMOTE SENSOR on the receiver using the receiver's remote control. For details, see page 25.

IMPORTANT! Point the remote control directly at the REMOTE SENSOR on the receiver.

Automatic Source Selection

When you *press play* on a component or the remote, the component begins playing immediately. On the other hand, if you select a *new source* on the receiver or the remote, the component begins playing immediately, but the previously selected source continues playing without sound for a few seconds.

Synchronized Recording

Synchronized recording means the tape deck starts recording as soon as a CD or record begins playing. To use synchronized recording, follow these steps:

Step 1 Put a tape in the deck, and a disc in the CD player or on the turntable.

Step 2 Press the REC and PAUSE button on the tape deck at the same time. This puts the tape deck in the REC/PAUSE state.

IMPORTANT! If you do not press the REC button and PAUSE button together, the synchronized recording feature will not operate.

Step 3 Press the PLAY button on the CD player or turntable.

As soon as the disc starts playing, the tape deck starts recording. When the disc ends, the tape deck switches back to the REC/PAUSE mode, and stops 4 seconds later.

NOTES:

- During synchronized recording, the CD or PHONO button is activated. Other SOURCE SELECT buttons are disabled to prevent recording failure.
- If your CD player is operated in the PROGRAM mode, a 4-second mute is recorded between tracks to enable the music scan feature of your tape deck to work.
- If the power of any component is shut off during synchronized recording, the system will not operate properly. In this case, you must start again with step 1.

Automatic Power ON/OFF

The CD player and cassette deck turn on and off along with the receiver. When you turn on the receiver (using either the remote or the receiver's POWER switch), the CD player or cassette deck will turn on automatically, depending which component was previously selected.

NOTE: This function has been added to COMPU LINK-3 (Enhanced COMPU LINK), an upgraded version of COMPU LINK-1. Refer to your JVC component manual for details.

AV COMPU LINK System

AV COMPU LINK

The AV COMPU LINK system interlocks the receiver with your JVC video components for simple operation. Connecting the AV COMPU LINK jacks on the back of the receiver will allow you to use the four functions listed in the left column.

Remote Control

You can control your TV via the REMOTE SENSOR on the receiver using the receiver's remote control. For details, see page 26.

IMPORTANT! Point the remote control at the REMOTE SENSOR on the receiver.

IMPORTANT! You can operate the VCR with this receiver's remote. When operating the VCR by remote control, point at the VCR directly, not at the receiver.

One-Touch Video Play

When a video cassette with its safety tab removed is loaded into the VCR, you can enjoy the video playback without setting the various switches manually.

NOTE: Even if your video cassette still has its safety tab, you can use this function by pressing the *PLAY* button on the VCR.

Automatic Power ON/OFF

The VCR and TV are automatically turned on or off along with the receiver. When you turn on the receiver with previously selected source VCR, the VCR and TV will turn on automatically. When you turn off the receiver, the VCR and TV will turn off automatically. When you turn on the receiver with previously selected source VIDEO, TV will turn on automatically. When you turn off the receiver, TV will turn off automatically.

Selecting the TV Input

When you turn on the receiver, the TV input (TV/VIDEO) is automatically changed to VIDEO to allow you to see the VCR's picture.

Using the Remote Control

By connecting the COMPU LINK jack to this receiver, you can operate the audio stereo component with this receiver's remote control. In addition, if your VCR is a JVC product, you can operate it with this receiver's remote control.

NOTE: The VCR does not work with the COMPU LINK remote control system. When you operate the VCR, you must aim the remote control at the VCR instead of the receiver.

Operating the Component Already Selected

Select a source with the SOURCE SELECT buttons on the remote control. Operate that source using the buttons just below the SOURCE SELECT buttons.

IMPORTANT! If you choose a source on the receiver directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using the remote control.

IMPORTANT! When you select CD or TAPE 1 on the remote control, the component will turn on and start playing automatically.

Turntable

After pressing the PHONO button, you can perform the following operations on the remote:

- ▶ Starts playing
- Stops playing

CD Player

After pressing the CD button, you can perform the following operations on the remote:

- ▶ Starts playing
- Stops playing
- || Stops playing temporarily. To release it, press ▶
- ◀◀ Skips to the beginning of the previous track
- ▶▶ Skips to the beginning of the next track
- ◀◀ Moves backward quickly during play
- ▶▶ Moves forward quickly during play

NOTE: You can also select a track by specifying the track number directly using the numeric buttons 1-10, and +10. To use the numeric buttons, you must press 10 KEY button first.

When you wish to select one of the discs installed in the CD player-changer, press the CD DISC button in the CONTROL section of the remote. After pressing the CD DISC button, you can perform the following operations on the remote.

1-6 and P Selects the number of the disc installed in the CD player-changer.

NOTE: If you have a CD player-changer XL-MC100C and XL-MC100M, 1-6 and P buttons function as DISC SKIP button. Press 1, 3, or 5 button to skip to the next disc. Press 2, 4, or 6 button to skip back to the previous disc.

Cassette Deck

After pressing the TAPE 1 button, you can perform the following operations on the remote:

- ▶ Starts playback
- Stops operation
- || Stops playback or recording temporarily. To release it, press ▶
- o|| Press to enter record-standby mode
To start recording, press ▶ .
- ◀◀ Skips to the beginning of the previous tune
- ▶▶ Skips to the beginning of the next tune
- ◀◀ Fast wind the tape from right to left
- ▶▶ Fast wind the tape from left to right

Operating the Component Not Currently Selected

When you want to operate one component while listening to another component (e.g., recording from a CD), use the buttons in the CONTROL section of the remote control. The CONTROL buttons allow you to use the operation buttons for the new component without affecting the component already playing.

VCR

After pressing VCR (in the CONTROL section of the remote control), you can perform the following operations on the remote:

- ▶ Starts playback
- Stops operation
- || Stops playback temporarily or freezes the picture. To release it, press ▶
- o|| Press to enter record-standby mode
To start recording, press ▶ .
- ◀◀ Rewinds video tape
- ▶▶ Fast winds video tape
- CHANNEL Scans to higher or lower TV channels

NOTE: You can also turn the VCR and TV on and off by pressing the VCR or TV button in the POWER section of the remote control.

NOTE: You can also select a TV channel by specifying the channel number directly using the numeric buttons 1-10, and +10. To use the numeric buttons, you must press 10 KEY button first.

IMPORTANT! Aim the remote control at the VCR or TV, not at the receiver.

Cassette Deck

Pressing TAPE 1 in the CONTROL section of the remote allows you to perform the same functions as pressing TAPE 1 in the SOURCE SELECT section of the remote.

Troubleshooting

Use this chart to help you solve everyday operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
Display window does not light up	Power cord not plugged in	Plug power cord into AC socket
No sound from speakers	Speaker wires not connected	Check speaker wiring and reconnect if necessary
	SPEAKERS buttons not set correctly	Push the SPEAKERS buttons in or out as desired
	Incorrect SOURCE button was pressed	Select the correct audio source
Sound from one speaker only	Speaker wires not connected properly	Check speaker wiring and reconnect if necessary
	Balance control is set to one extreme	Adjust BALANCE control so that both speakers have sound
Continuous hiss or buzzing during FM reception	Incoming signal is too weak	Adjust antenna
	Station is too far away	Select a new station
	Incorrect antenna used	Check with your dealer to be sure you have the correct antenna
	Antenna not connected properly	Check connections
Occasional cracking noise during FM reception	Ignition noise from automobiles	Move the antenna farther from automobile traffic
Howling during record playing	Turntable too close to speaker	Move speakers away from turntable
Remote control does not work	There is an obstruction in front of the REMOTE SENSOR on the receiver	Remove the obstruction
	Batteries are weak	Replace batteries

Specifications

Amplifier

Output Power (2-channel operation)

Front Channel

120 watts per channel, min. RMS, both channels driven into 8 ohms from 20 Hz to 20 kHz with no more than 0.06 % total harmonic distortion.

Output Power (4-channel operation)

Front Channel

70 watts per channel, min. RMS, both channels driven into 8 ohms at 1kHz with no more than 0.7% total harmonic distortion.

Center channel

70 watts, min. RMS, into 8 ohms at 1 kHz, with no more than 0.7% total harmonic distortion

Rear channel

20 watts per channel, min. RMS, both channels driven into 8 ohms at 1KHz, with no more than 0.7% total harmonic distortion

Total Harmonic Distortion (8 ohms, 1 kHz)

0.06 %* at 120 watts output

Frequency Response (8 ohms)

PHONO

20 Hz to 20 kHz (± 0.5 dB)

CD / TAPE 1 / TAPE 2 / VCR / VIDEO

10 Hz to 30 kHz (± 1 dB)

Signal-to-Noise Ratio ('66 IHF / '78 IHF)

PHONO

70 dB / 78 dB (REC OUT)

CD / TAPE 1 / TAPE 2 / VCR / VIDEO

91 dB / 80 dB

RIAA Phono Equalization

± 0.5 dB (20 Hz to 20 kHz)

Input Sensitivity / Impedance (1 kHz)

PHONO

2.5 mV / 47 k ohms

CD / TAPE 1 / TAPE 2 / VCR / VIDEO

230 mV / 47 k ohms

Output Level

TAPE 1 / TAPE 2 / VCR

230 mV

Tone Control Range

BASS $+8 \pm 2$ dB

-8 ± 2 dB at 100 Hz

TREBLE $+8 \pm 2$ dB

-8 ± 2 dB at 10 kHz

FM Tuner (IHF)

Tuning Range	87.5 MHz to 108.0 MHz
Usable Sensitivity	10.8 dBf (0.95 μ V / 75 ohms)
50 dB Quieting Sensitivity	
Monaural	16.3 dBf (1.8 μ V / 75 ohms)
Stereo	38.3 dBf (22.5 μ V / 75 ohms)
Signal-to-Noise Ratio (IHF-A weighted)	
Monaural	80 dB at 85 dBf
Stereo	73 dB at 85 dBf
Total Harmonic Distortion	
Monaural	0.15 % at 1 kHz
Stereo	0.2 % at 1 kHz
Stereo Separation at REC OUT	40 dB at 1 kHz
Capture Ratio	1.5 dB (10 mV / 300 ohms)
Alternate Channel Selectivity	60 dB: ($\pm$ 400 kHz)
Frequency Response	30 Hz to 15 kHz: (+0.5 dB, -3 dB)

AM Tuner

Tuning Range	530 kHz to 1,710 kHz
Usable Sensitivity	
Loop antenna	300 μ V/m at 1,000 kHz
External antenna	30 μ V at 1,000 kHz
Signal-to-Noise Ratio	50 dB (100mV / m, at 1,000 kHz)

General

Power Requirements	AC 120V $\sim$, 60 Hz
Power Consumption	320 watts, 440 VA
Dimensions (W x H x D)	17-3/16 x 5 x 13-7/16 inches 435 x 156 x 396 mm
Weight	27.6 lbs (12.5 kg)

*Measured by JVC Audio Analysis System

■ LC7218 (IC102) : PLL Synthesizer

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC401.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC401.

2. Terminal Layout

3. Block Diagram

4. Pin Function Description

4. Pin Function Description			
Pin No.	Symbol	I/O	Functions and Operations
1,24	X in ,X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC401).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	--	Not used.
7	TUNED	I	Receive the tuned signal from IC104 (LA1266A).
8	STOP IN	--	Not used.
9	POWER	--	Non connection
10	QSC	--	ON mode with "H" and OFF mode with "L". (Non connection)
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7 (tuned in) go to "H".
18	AM in	I	Input the local oscillator signal of AM.
19	FM in	I	Input the local oscillator signal of FM.
20	V _{DD}	--	Power supply terminal .
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	--	Non connection
23	V _{SS}	--	Power supply.

LA1266A (IC104) : FM AM IF AMP & detector

1. The main function descriptions

- (1) Amplify and detect of FM intermodulation frequencies.
- (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Top View

FM-in	1	24	AM-OSC out
BYPASS	2	23	AM-OSC
BYPASS	3	22	V.ref
GND	4	21	AM-in
FM-DET	5	20	AM-Mix
FM-DET	6	19	AM-AGC
V _{CC}	7	18	AM-IF
SIG	8	17	AM Adj.
FM-AFC	9	16	FM Adj.
FM-IF	10	15	AM out
AM-IF	11	14	NAR SM
FM-OUT	12	13	STRQ

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	FM in	I	Input terminal for FM signal.
2,3	BYPASS	--	Bypass of FM IF Amp.
4	GND	--	Device ground terminal.
5,6	FM DET	--	FM detect transformer.
7	V _{CC}	--	Power supply terminal.
8	SIG	O	When the set is tuning, this terminal become "L".
9	FM AFC	O	Output terminal of voltage for FM - AFC.
10	FM IF	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of FM IF does output.
11	AM IF	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of AM IF does output.
12	FM OUT	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal going to "High".
14	NAR SM	--	Control the Band-width of signal meter.
15	AM out	O	AM detection output.
16	FM Adj.	--	FM stop level (or mute level) adjust.
17	AM Adj.	--	AM stop level (or mute level) adjust.
18	AM-IF	I	AM IF Signal input.
19	AM-AGC	I	AGC voltage Input terminal for AM.
20	AM-MIX	O	Output terminal for AM mixer.
21	AM-IN	I	Input terminal for AM RF Signal.
22	V.REF	--	Band-width control of FM signal meter.
23	AM-OSC	--	AM Local oscillation circuit.
24	AM-OSC OUT	O	AM Local Oscillation Signal output.

■ LA3401 (IC105) : FM MPX Detector

1. The main function descriptions

- (1) Detect the FM Multiplex Signal (Stereo signal).
- (2) When receiving FM Stereo Signal, it outputs the signal for indicator.
- (3) AM / FM Audio Amplifier.

2. Terminal Layout

3. Top View & Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	Input terminal for AM detection signal.
2	FM in	I	Input terminal for FM detection signal.
3	PILOT OUT	O	Output of MPX pilot signal (Connect to Pin18).
4	SEPA. ADJ.	--	Separation adjustment.
5	L-out	O	Left channel signal output.
6	L	O	Reversal output of Pin5.
7	R	O	Reversal output of Pin8.
8	R-out	O	Right channel signal output
9	MUTE CONT	--	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	Mute out	---	Not used
12	GND	--	Ground terminal.
13	STEREO	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	MUTE CONT	--	The mute time is controlled by the connected capacitor when changing over the FM / AM .
15	MUTE IN	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stop.
18	PILOT IN	I	PLL input.
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	V _{CC}	--	Power supply.

■ M50198P(IC602) : Digital Delay IC

1. Explanation of the operation

Audio signal is input to LPF1 to reduce the high frequency components. The output from LPF1 is coded to 1 bit signal by ADM modulator and comparator with inside .This digital signal is input to main control logic. And this signal obtain various effect,and is written in SRAM .At the same time main control logic read the data from SRAM ,and input it to ADM demodulator .The ADM demodulator converts 1bit signal to analog signal.The analog signal is input to LPF2 to reduce the suprius components,and output to Pin 13.

LPF1 Reject the high frequency components which is contained the input signal and unnecessary.

LPF2 Reject the suprius components which is generated by the ADM demodulation by using with comparator.

OP1,CC1 For ADM modulator.

OP2,CC2 For ADM demodulator.

4. Pin Functions

Pin No.	Symbol	I/O	Functions and Operations
1	V _{SS}		Power Supply -15V.
2	L-out1	O	10dB step attenuator output.
3	L-in1	I	10dB step attenuator input.
4	A GND		Ground.
5	L-in2	I	2dB step attenuator input (left).
6	L-out2	O	2dB step attenuator output (left).
7	GND		Ground.
8	CK	I	Clock input.
9	DATA	I	Serial data input is to decide the level of attenuation.
10	ST	I	Strobe input.
11	R-out2	O	2dB step attenuator output (Right).
12	R-in2	I	2dB step attenuator input (Right).
13	GND		Ground.
14	R-in1	I	10dB step attenuator input.
15	R-out1	O	10dB step attenuator output.
16	V _{DD}		Power Supply +15V.

■ XR1095CP (IC404): Graphic Equalizer Filter & Display driver

1. Terminal Layout

2. Pin function

Pin No.	Symbol	Function
1~5,9~16	A1~A13	Anode terminal
30~38	G1~G9	Grid terminal
25	RIN	Right channel input
26	LIN	Left channel input
22	DIM	Brightness control varies width of G outputs.
27	GPH	Filter amplitude display duration control. A resistor and timing capacitor from this pin to VSS adjust Peak Hold Decay Time.
28	TPH	Total output display on/off control.
40	CLKR	Oscillator timing resistor between this pin and CLKC pin.
41	CLKC	Oscillator timing capacitor between this pin and VSS.
20	S1	Chip select 1 pin.
21	S1	Chip select 2 pin.
19	DI	Serial port data.
18	SPCLK	Serial port clock.
17	CS	Chip Select.
42	VDD	Plus supply, nominally 5VDC.
23	VSS	Minus supply, nominally -5VDC.
24	GND	Analog input reference.

Disassembly Procedures

■ Removing the Top Cover

1. Remove the 4 screws fastening both sides of the top cover, and the 2 screws fastening the rear side.
2. Remove the top cover.

■ Removing the Bottom Cover

1. Remove the 13 screws ①.
2. Remove the bottom cover.

■ Removing the Front Panel

1. Remove the 3 screws ② fastening top of the front panel, and the 4 screws ③ fastening bottom of the front panel.
2. Remove the master volume knob.
3. Remove the nut fastening the volume.
4. Remove the front panel disconnecting some wires.

■ Removing the Tuner P.C. Board

1. Remove all screws installed at rear panel.
2. Take it out.

■ Removing the Power Transistor

1. Remove the bottom cover
2. Unsolder the broken transistor.
3. Remove the screw fastening it.
4. Remove it.

Fig 3. Bottom Cover

Adjustment Procedures

■ Tuner section

Tuning range

Area	Range	
	MW (kHz)	FM (MHz)
the U.S.A., Canada	530~1710	87.5~108

(1) Tuning voltage

Confirm the voltages in the table below at TP101. If the voltages are not satisfied, replace T101 and T103 for MW, T102 and FE101 for FM.

FM Tuning voltage (Unit : V)

Area	Frequency	
	87.5MHz	108MHz
the U.S.A., Canada	1.6 ± 1.0 (V)	8.0 ± 2.0 (V)

AM Tuning voltage (Unit : V)

Area	Frequency (MW)	
	530kHz	1710kHz
the U.S.A., Canada	1.0 ± 0.2	8.0 ± 0.8

(2) FM center meter

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T105 (detector coil) so that the voltage at TP102 becomes 0 ± 1.5 mV.

(3) MW Tracking

Adjust T101 (antenna coil) to obtain the best receiving sensitivity on 600kHz.

Adjust TC105 (antenna trimmer) to obtain the best receiving sensitivity on 1400kHz.

■ Power Amplifier section

■ Idling Current

- (1) Set the volume control to minimum during this adjustment.
- (2) Turn R751 and R752 fully counterclockwise before the power switch on.
- (3) Always start from cold, and allow 10 minutes to warm up before adjustment. If the heatsink is already warm from previous use the correct adjustment can not be made.
- (5) Connect a DC voltmeter to R787 resistor's leads for left channel, or to R788 for right channel.
- (6) Adjust R751 for left channel, or R752 for right channel, so that the DC voltmeter becomes 2mV ~ 7mV
